## Virgin Technologies

### Exchange Information Easily

Virgin Technologies was founded in 2001 and is based in Edmonton, Alberta. A leading provider of innovative satellite telecommunications solutions, Virgin Technologies services organizations, government agencies and professionals across North America. The Company provides industry specific satellite telecommunications and services such as VoIP, RoIP and VPN over satellite via its own iDIRECT satellite network.

The Company originally provided rural and remote businesses with high speed Internet. Since then it has evolved into a leading-edge, full service telecommunications provider operating its own satellite teleport (V-LINK), proprietary self-aligning satellite systems (MoboSat) and its own VoIP telephone network (V-TALK). The Company's solutions enable businesses to extend their networks to virtually any remote office or work site in North America.

Committed to outstanding customer service and support, leading edge solutions, and flexible options, the Company is continually innovating and introducing new products and services. The Company provides 24/7/365 customer support and same day / next day, on-site service to its business customers.
