Flexible Oilfield Solutions

Fixed Systems

A fixed system solution provides a permanently mounted system attached to a building with an open, south-facing view. This solution is a low cost system designed to offer high speed Internet with all the additional services that we provide.

Mobile Systems

Mobile system solutions offer the flexibility to stow while in transport and deploy automatically within a few minutes from any location using the systems self-aligning features. These systems are great for larger vehicles, trailers or anywhere portability is desired. These dishes are available on a skid or permanently mounted. These systems are designed to turn a full 360 degrees and self-align at the push of a button.

Cold Weather Operations

Both of the fixed and mobile systems are designed to work in cold weather environments. We also offer different bandwidth options as well depending on your needs and budget.

Add-ons and Enhancements

Among the products beyond remote connectivity are Voice-Over-IP (VoIP), redundant Internet back-up, wireless and VPN solutions. These products and services truly make us your complete solution provider. We ensure your rig and its staff are communicating either to your field or office as if they were down the street.
