

Innovative Ways To Make Communication Easy

Virgin Technologies provides its own high quality satellite network, with 24/7/365 monitored and controlled traffic levels to ensure the highest quality VOIP Phone/Fax service in the industry.

Our Network

High performance, high quality, exceptional service

In a standard, urban office environment broadband Internet is now a requirement for most businesses. But for those whose jobs take them away from the office to remote locations, accessing the corporate network or Internet often means a return to slow dial-up, or worse still, no access at all. Furthermore, VoIP phone and fax services wouldn't even seem to be an option in these locations - UNTIL NOW.

With Virgin Technologies' V-LINK network, you can communicate from remote locations just like you're in the office - including Internet, email, VoIP, telephone, fax, Intranet, VPN - wherever you are in Canada or the United States. Delivered via some of the most advanced commercial satellite systems on the market, you can setup a broadband mobile office in minutes with speeds up to 2000 kbps down and 512 kbps up.

V-LINK provides seamless network coverage across most of Canada and USA--even from the most remote areas of the desert or Arctic. Users are able to get broadband wherever they go.

Features & Benefits

- **Standard office applications:** Internet, email, VoIP, telephone, fax, Intranet, VPN, file transfer
- **Completely secure:** Connect seamlessly via your preferred VPN application.
- **Highest quality VoIP:** Network traffic is constantly monitored and controlled to dramatically reduce jitter rates and delay, when using VoIP services like phone and fax. Our VoIP phone service is better than satellite phones.

Compatible Satellite Systems

- **MoboSat Ku**
 - mobile, automated, self-aligning satellite system
 - best for frequent moves or vehicle mounts
- **iDIRECT**
 - fixed satellite system
 - best for permanent or long term remote locations

Enhancing Productivity

Delivering competitive advantage

Extensive coverage

V-LINK delivers seamless network coverage across most of North America. Users are able to get broadband Internet wherever they go – not just in major cities or at the airport. V-LINK is accessible in even the most remote parts of Canada and the United States.

Easy to use

V-LINK is designed for simplicity and ease of use. No specialist technical expertise is required to set up and use it. It's easy to manage costs, because we can track service usage and charges in real-time. You can use one satellite system to access V-LINK from anywhere in North America. And there are never any compatibility issues with local telecoms networks, because you connect directly to the satellite.

Monitored network

The V-LINK network is monitored 24/7/365 to ensure you the highest quality of service. We provide critical telecommunications services to government, military and large business customers and we understand you cannot afford to be down for any reason.

Simultaneous voice and broadband data

With V-LINK you can access data applications at speeds up to 2000 kbps and make a VoIP phone call at the same time. Furthermore, if you are using our VoIP PBX phone service, multiple users can be on the phone at the same time. Your productivity and your time are important to us and we work to ensure our solutions meet or exceed your expectations.

Flexible airtime and speeds

With the V-LINK network, standard airtime packages and speeds are available or we can tailor a package to meet your usage and budgetary requirements. Your business is unique and we are experts in designing custom solutions to help you meet your objectives.

Fast, quality, 24/7/365 technical support

Virgin Technologies has built its business around providing high quality customer service and support. We realize your communications are mission critical. By controlling our own network, V-LINK, we can respond immediately to your support requests. We have direct access to the network and can resolve issues quickly. No more waiting in support queues or escalation tiers. Get right to the point.
