

V-LINK Network

Reliable and efficient network access for enterprise

VIRGIN
TECHNOLOGIES

State-of-the-art teleport

Hosted shared and private platforms that enable customers to integrate their network quickly and cost effectively.

From its experienced staff operating and monitoring the teleport 24/7, to state-of-the-art networking technology, Virgin's teleport is designed to provide the

infrastructure that supports the business goals of network, enterprise and government customers.

Customizable enterprise solutions

The communications requirements of government and enterprise customers in today's environment are constantly changing. When remote locations cannot be connected to headquarters, they are seldom integrated into centralized processes.

Virgin's teleport services can be customized to meet your unique business requirements with various speeds, price points and more.

A world class Teleport providing the best in class V-LINK Network with satellite efficient V-TALK. Powered by V-GEAR and supported by V-SERV.

V-LINK Network

Backed by a world class Teleport, the V-LINK Network provides reliable and efficient enterprise level network access. V-LINK hosts shared and private platforms that enable our customers to integrate their network quickly and cost effectively. There are multiple service levels available with flexible speed options.

From its experienced staff operating and monitoring the Teleport 24/7, to state-of-the-art networking and video technology, V-LINK is designed to provide the infrastructure that supports secure, mission critical communications for government, media, emergency response and enterprise level customers.

V-TALK Service

Designed specifically for satellite, V-Talk, is a high quality, dependable voice over IP service with minimal jitter. The perfect integration with our Teleport, it provides a direct connection from the satellite to the Internet. We offer two products: VoIP telephone and our new RoIP which is Radio over Internet Protocol. We have specific V-GEAR radio systems that are robust, durable and sound terrific. RoIP provides a radio connection wherever you are. V-Talk is for local, North American and World Wide communications. We offer several flexible packages to meet your needs.

V-GEAR Hardware

Our rugged, field engineered V-GEAR equipment is designed to operate in the most challenging environmental conditions anywhere in North America. V-GEAR has been manufactured in-house, combined with industry leaders, and rigorously tested to provide the most complete, innovative and durable hardware that's ready when you are.

From our 1-button deploy satellite system, MoboSat Ku, to our new, highly portable flyaway system, Predator - we get you connected, your way! With deployments in several countries, V-GEAR is flexible and durable and designed to meet your business challenges.

V-SERV Installation and Service

For our enterprise customers, we offer a wide range of V-SERV service solutions - a comprehensive offering of flexible and customizable options for installation, technical support, monitoring, field servicing, warranties, training and whatever it takes to keep our customers connected.

Virgin Technologies is well known and respected for its first class customer service. We offer 24/7 technical support and same/next day on-site service.

Solutions by Industry

Reliable, robust solutions tailored to your needs

Emergency response

Guaranteed telecommunications for emergencies. Essential telecommunications ready when you are. Our satellite Internet solutions provide immediate and reliable communications within minutes--regardless of your location or the state of terrestrial communications.

In emergency situations, our solutions can help save lives through instant restoration of vital communications to coordinate emergency response or relief efforts. Our mobile satellite internet and RoIP will have you communicating via email, phone, VPN or live video within minutes.

Oil, Gas & Mining

Reliable and convenient - even in the most extreme locations or conditions. Exchange data, send and receive email, make phone calls, improve cel coverage, use our NEW VoIP intercoms or connect to your corporate VPN quickly, easily and securely.

Our exploration solutions are ideal for keeping teams connected with each other and head office--no matter where they're based or for how long. Improve decision making and asset management by enabling consultants, geologists, site engineers, and project managers to communicate with HQ without delay.

Energy & Utilities

Dependable communications for critical infrastructure control. National energy and utility companies have long depended on continuous remote monitoring and control in order to respond to constant changes in demand and network component status.

Upgrade your SCADA network to include real-time information sharing with headquarters and technical centers that helps dispatched field engineers to quickly diagnose and solve problems, as well as real-time monitoring. Our RTOC solutions will keep you on the leading edge.

Construction

Reliable and effective telecommunications while you're in the field. Keep projects rolling with email, VoIP phone, or photos and video that can all be sent securely over your corporate VPN. Site video surveillance and analysis are also possible.

Our broadband satellite Internet solutions are ideal for construction projects involving pipelines, oilfields, power lines, road and railway infrastructure, where the project team is moving on a regular basis but still needs reliable communications back to head office.

Government

Dependable, secure broadband access--even in the most extreme locations or conditions. Our broadband satellite Internet solutions provide immediate and reliable communications within minutes--regardless of your location. Global coverage available.

We realize your communications are critical. Our solutions enable you to connect to your corporate network, send/receive email and have access to the Internet and standard office applications. Our solutions will have you communicating via email, phone, VPN and/or live video within minutes.

Military

Time-critical communications with an exceptional level of availability, security and reliability. Our state-of-the-art mobile satellites provide simultaneous voice and broadband data, and when combined with a VPN, provide a secure, reliable solution for military communications.

In critical situations, our solutions can help save lives through instant restoration of vital communications to coordinate response efforts. Our advanced military solutions provide you with secure, reliable and easily portable communications - quickly.

Enhancing Productivity

Delivering competitive advantage

Extensive coverage

V-LINK delivers seamless network coverage across most of North America. Users are able to get broadband Internet wherever they go - not just in major cities or at the airport. V-LINK is accessible in even the most remote part of Canada and the United States.

Easy to use

V-LINK is designed for simplicity and ease of use. No specialized technical expertise is required to setup and use it. It's easy to manage costs because we can track service usage and charges in real-time. You can use one satellite system to access V-LINK from anywhere in North America. There are never any compatibility issues with local telecom networks because you connect directly to the satellite.

Monitored network

The V-LINK network is monitored 24/7/365 to ensure you the highest quality of service. We provide critical telecommunications services to government, military and enterprise customers and we understand you cannot afford to be down for any reason.

Flexible airtime and speeds

With the V-LINK network, we offer the most popular airtime packages or we can tailor a package to meet your usage and budgetary requirements. Your business is unique and we are experts in designing custom solutions to help you meet your objectives.

Simultaneous voice and broadband data

With V-LINK you can access data applications at broadband speeds and make a VoIP phone call at the same time. Furthermore, if you are using our VoIP PBX phone service, multiple users can be on the phone at the same time. Your productivity and your time are important to us and we work to ensure our solutions meet or exceed your expectations.

Fast, quality 24/7/365 technical support

Virgin Technologies has built its business around providing high quality customer service and support. We realize your communications are mission critical. By controlling our own network, V-LINK, we can respond immediately to your support requests. We have direct access to the network and can resolve issues quickly. No more waiting in support queues or escalation tiers. Get right to the point.
