VPN Over Satellite

Designed for use over satellite, Virgin Technologies' VPN solution enables secure point-to-point communication anywhere in North America. Delivered via some of the most advanced commercial satellite solutions on the market, you can setup a broadband mobile office in minutes and connect securely via VPN. Use Internet, email, file transfer, Intranet and VoIP through your secure VPN connection.

**Secure
Communications
From Anywhere.
Don't Let
Security Slow
You Down.**

FEATURES & BENEFITS

EASY TO USE

- Access standard office applications as if you are in the office. Use the Internet, email, VoIP, telephone, Intranet and file transfer securely and with minimal delay.

COMPATIBLE

- Interoperability with all satellite vendors TCP spoofed (PEP) network acceleration solutions.

SUPERIOR QUALITY

- Designed to offer IPsec VPN connections over satellite networks. Effects of propagation delays inherent in satellite networks are minimal with our combined solution of a Bandit 2™ router and state-of-the-art teleport and satellite technology.

EASY INSTALLATION AND MANAGEMENT

- Menu-driven user interface, support of SNMP management and plug 'n play features allow for remote configuration and support from a centralized Network Operation Center (NOC).

VERSATILE

- Can be used to interoperate with off-the-shelf IPsec software clients.

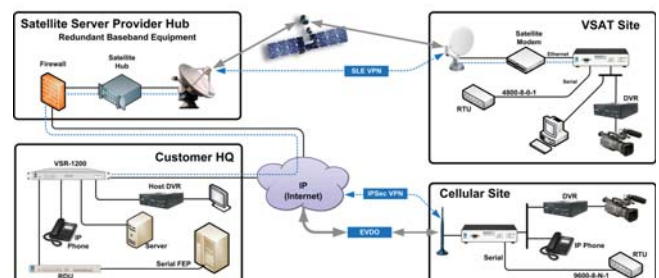

FEATURES & BENEFITS

HIGH PERFORMANCE OVER SATELLITE

- Bandit 2™, with its built-in support of Selective Layer Encryption VPN capability, delivers high performance VPN services over satellite by interoperating with standards and proprietary based methods of TCP acceleration used to overcome the performance issues associated with satellite connections.

STATEFUL FIREWALL

- Built-in stateful packet inspection firewall functionality; IP filtering; protection against Denial of Service (DoS) attacks, additional DMZ LAN port; NAT and PrAT (Private Address Translation)
