VoIP Voice Over IP System

SNOM PBX Telephone

LinkSys VoIP Telephone

Designed for use over satellite, Virgin Technologies' Voice Over IP (VoIP) service is industry best with superior sound quality and built-in security features such as a firewall and direct link from our satellite hubs to the telephone networks. The service includes a local area code anywhere you go, voicemail, call waiting, call statistics and unlimited free long distance calling anywhere in North America.

The full virtual PBX system also includes telephone line sharing and an auto attendant.

Individual and PBX Phones Go Anywhere You Go With Local Area Code

FEATURES & BENEFITS

EXTENDED CALLING FEATURES

- Includes all standard calling features and much more.

EASY TO USE

- VoIP phones work just like a regular phone. The only difference is that rather than use a land or cellular line, they use your Internet connection. A high speed connection is required.

HIGHLY PORTABLE

- Phone system moves with you wherever you go. Telephone number and area code stay the same. Simply unplug it at one location and plug it back in at the next location.

SCALABLE

- Expand from individual phones to a full PBX office system.

SUPERIOR QUALITY

- Excellent voice clarity with very low jitter.

SECURE

- Built-in security features such as a firewall and direct link from our satellite hubs to the telephone networks.

SYSTEM OPTIONS
